

We are building!

In the headquarters of the Faculty in the centre of Bozen-Bolzano we will soon be able to:

- realise photographs,
- make videos,
- woodwork,
- process metals and
- plastics,
- develop rapid prototypes.

Activities in the workshops can be very noisy. For this reason we are building a two-floor underground structure in the courtyard newly designed by our students.

This way, we will have more space in the old building to:

- print with different techniques,
- model shapes and moulds,
- realise models with different techniques.

The workshops will be realised in a two-floor underground structure in the courtyard, between the main building and the administrative one. Most of the workshops will be connected to a common working space, "the Pool", and will open up to a courtyard that can eventually be used as a further working space. On each floor the new workshops will be connected to those in the old building. The structure will be covered by a walk-in terrace that can be accessed from via Cassa di Risparmio and via Ospedale.

Total surface: 1.968 m²

Expected completion: August 2010

Concept:

Arch. Stephan Dellago and Prof. Kuno Prey

Terrace Concept:

Arch. Roberto Gigliotti with the students
Martina Albasini, Veronika Gantioler,
Katharina Moebus, Daniele Zanoni

Builder-owner: Autonomous Province of
Bozen/Bolzano - South Tyrol

ASS Florian Mussner
